

Sprint 3 Report

OrgPoint

Actions to stop doing

Sprint 3 went smoother than the other ones. One thing need to do more of is checking in and running ideas/questions by one another. Although we have been doing this, more of it could make sprint work progress more efficient. This is difficult however with conflicting schedules.

Actions to keep doing

Consistently having attendance during the group meetings and continuing to use slack as a means of communication really brought people up to speed and together during the process. Also everyone was on time for SCRUM meetings which really improved morale and made everyone excited about progress.

Actions to start doing

Following through on actions and being more detailed during the SCRUM meetings. Also discussing corner cases and issues we may run into when working on all platforms in parallel.

Work completed

1. Stats page implementation
2. Timeline implementation
3. General design changes
4. Convert to HTTPS and URL restructuring
5. Users bug fix
6. iOS login, profile, and navigation views
7. iOS timeline implementation
8. Android Company pages
9. Android timeline implementation
10. Android Stats/settings page

Work not completed

1. Search implementation
2. (Partially) Android allow user login and pull data from backend. Pages complete but require work to display real data.

Work completion rate - Burnup Chart

Done out of the total number of sprint points
